11 Bletchley, Saffron Gardens, nos. 101, 102, 109. R -S •
12 Harrold, no. 112. R -S •

Notes
See D3-3. Much the same applies here, except that the cordonned form is not found in Kent. The Broadstairs specimen is HM and possibly would belong better in D3-2 or D3-3. Some thinner and smaller examples are found across the Chilterns, further afield than the plain form and close to the conquest, like the thin group C pair from Prae Wood. Essentially, however, this is still a native form.

The Prae Wood 'group A' pot, no. 9, is unique and impressive in form. It was not found with the other group A vessels at the bottom of the enclosure A ditch, but in the 'earlier silting of the main dyke'.
